Rotaract Club of Xiamen University Malaysia

Rotary Club of Kuala Lumpur Dynamics

Rotary Club of Tun Razak Exchange

SDC Hackathon

Technical Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: 25 October 2026

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

SDC HACKATHON 2026

Technical & Tools Declaration

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: [Insert date]

Instructions: Declare every API, cloud service, AI tool, dataset, model, and sponsor resource your team used to build the project. Complete every section; where a category does not apply, tick "No" or write "None" – do not leave it blank. Submit as a single PDF document named "SDC2026_TeamName_TechDeclaration.pdf" together with your project submission. Undeclared third-party resources discovered at judging may affect your score or eligibility.

1. Team & Project Overview

Team Name	NOVA
Project / Solution Name	EventFlow
Name (Leader)	Tan Le Han
Email & Phone (Leader)	jeanette223tan@gmail.com
University Affiliation(s)	Xiamen University Malaysia
Live Prototype URL	https://event-flow-ai-customer-portal.replit.app/login
Code Repository URL (public / access granted to judges)	https://github.com/Joycemsan328/SDC_Hackathon.git

2. Architecture & Technology Stack

2.1 System Architecture Overview

Describe how the components declared in this document connect end-to-end (e.g., user interface → backend → AI model/API → database → cloud hosting). Attach a system block diagram as an appendix if available.

[Maximum 200 words]

EventFlow AI is an AI-powered event planning platform built using a React and TypeScript frontend, a Node.js and Express backend, Supabase, and RunPod Serverless.

The platform provides two main interfaces: a Customer Portal and a Business Portal. Customers submit event requests containing details such as event type, budget, location, guest count, and required services.

The backend processes these requests and integrates with Supabase for user authentication and data management. It communicates with a Qwen3-8B language model hosted on RunPod Serverless to generate two event proposals (Plan A and Plan B), including service recommendations, itemised costs, and estimated budgets.

Event planning companies review and approve AI-generated proposals before customers can view them. Customers can select a proposal or submit change requests, triggering AI regeneration and another business review cycle.

Supabase is intended to manage event requests, proposals, supplier records, and approval statuses. Replit provides the cloud-based development environment for building and testing the prototype.

2.2 Languages, Frameworks & Libraries

List the main programming languages, frameworks, and third-party libraries that your team did not create. Open-source use is permitted provided it is declared and properly licensed/attributed.

Name & Version	Purpose in Project	License
TypeScript (version to verify)	Main programming language for frontend and backend development.	Apache 2.0
React (version to verify)	Building the interactive customer and business portal interfaces.	MIT
Node.js (version to verify)	JavaScript runtime for the backend API server.	MIT

Name & Version	Purpose in Project	License
Express.js (v5)	Backend framework for API routes, event processing and AI integration.	MIT
Zod (version to verify)	Validating API requests and AI-generated proposal data.	MIT
Drizzle ORM (version to verify)	Database schema definition and database interaction.	Apache 2.0

3. APIs & Cloud Services

3.1 External APIs

List every external API your solution calls (GenAI, maps, payments, messaging, data feeds, etc.). Do not include API keys or secrets in this document.

API & Provider	Purpose in Project	Access Tier (free / paid / sponsor-provided)
RunPod Serverless API (RunPod)	Hosts Qwen3-8B to generate AI-powered event proposals, including Plan A and Plan B with estimated costs.	Paid (usage-based)
Supabase API (Supabase)	Manages user authentication and stores event requests, proposals, approvals, and supplier information.	Free tier (if applicable)

3.2 Cloud Platforms & Deployment

List every cloud service used for hosting, storage, databases, authentication, or compute, and indicate how the prototype is deployed.

Service & Provider	Purpose in Project	Plan / Region
Replit (Replit)	Cloud-based development environment for building, running and testing the web application and backend.	Free
RunPod Serverless (RunPod)	GPU cloud computing for hosting the Qwen3-8B AI model and generating event proposals.	Pay-as-you-go
Supabase (Supabase)	PostgreSQL database and authentication for managing users, event requests, proposals and supplier records.	Free Tier
GitHub (GitHub)	Cloud-based source code hosting and version control for team collaboration.	Free

4. AI Tools, Models & Datasets

4.1 AI Models Used in the Solution

List every AI model embedded in or called by your application, including pre-trained, fine-tuned, and self-trained models.

Model & Version	Source / Provider	Usage (pre-trained / fine-tuned / self-trained)	License / Terms
Qwen3-8B	Qwen Team (Hosted on RunPod Serverless)	Pre-trained model used to generate event proposals, including Plan A and Plan B, itemised budgets, and service recommendations. No fine-tuning performed.	Apache License 2.0

4.2 Datasets

List all datasets used for training, fine-tuning, evaluation, or in the running application. State clearly if a dataset contains personal or sensitive data.

Dataset Name	Source / URL	Type (public / private / self-collected / synthetic)	License	Personal Data? (Y/N)
Eventflow Customer and Event Data	Supabase	Private	Proprietary	Y
EventFlow Business Data	Supabase	Private	Proprietary	Y
Event Planning Test Data	Team-generated	Synthetic	Team-owned	N
EventFlow AI Synthetic Test Dataset	Self-generated by AI Model Development Team	Synthetic	Internally generated	N

4.3 AI-Assisted Development Tools

Tools used to help write code, design, content, or documentation (e.g., chat assistants, code completion tools, image generators). Declaring these tools does not reduce your score; undeclared use may.

Did your team use any generative-AI tool to help create code, design, text, or other project material?

☑ Yes ☐ No

If yes, list them below:

Tool & Version	Used For	Extent of Use (minor / moderate / major)
ChatGPT (OpenAI)	Project planning, system architecture, debugging and API integration guidance	Major
OpenAI Codex	Debugging, backend development and RunPod API integration	Major
Replit AI	AI-assisted code generation, editing and debugging within the Replit environment	Moderate
Doubao	Used to generate pitch demo video	Minor

Briefly describe how your team reviewed, tested, and took responsibility for AI-generated output:

[Maximum 100 words]

Our team reviewed AI-generated code and content to ensure they aligned with the project's requirements. We manually inspected and modified generated code, tested frontend functionality and backend API endpoints, and performed debugging to identify and resolve errors. Automated tests were conducted for the RunPod AI integration, including response validation and error handling. We also reviewed AI-generated suggestions before incorporating them into the project. All final design decisions, code modifications, testing, and submitted materials remain the responsibility of our team.

5. Sponsor-Provided Resources

Declare any official SDC sponsor-provided GenAI API, cloud credits, tools, mentoring, or data that your team used.

Did your project use any official SDC sponsor-provided resource?

☑ Yes ☐ No

If yes, list them below:

Sponsor	**Resource (API / credits / platform / data)**	**How It Was Used in the Project**
RunPod	Sponsor-provided GPU cloud credits	Used to host the Qwen3-8B model through RunPod Serverless for AI-powered event proposal generation.
Replit	Sponsor-provided platform services and credits	Used to generate prompts to help assist in platform development.

Was the sponsor resource essential to the core functionality of the prototype, or could it be replaced? Explain briefly:

[Maximum 100 words]

RunPod Serverless provides GPU computing resources to host the Qwen3-8B model for AI-powered event proposal generation. While AI inference is essential to the intended core functionality of EventFlow AI, RunPod itself is replaceable with other compatible GPU cloud providers or model hosting platforms. Migrating to another provider would require configuration changes, integration testing, and potentially additional costs. Therefore, the sponsor-provided resource supports the prototype's AI functionality but is not an irreplaceable technical dependency.

Replit provides a cloud-based development environment for coding, testing, and collaboration. However, it is not essential to the prototype's core functionality, as alternative development environments, such as Visual Studio Code, could be used. Therefore, both resources support the development and operation of EventFlow AI but are not irreplaceable technical dependencies.

6. Security, Privacy & Responsible Use

6.1 Data Handling & Privacy

What user or personal data does your application collect, store, or send to third-party services (including AI APIs)? How is it protected, and how long is it kept? State "No user data is collected" if applicable.

[Maximum 150 words]

EventFlow AI processes user information such as names, email addresses, and event planning details, including event type, date, location, budget, guest count, and service requirements.

The prototype uses browser-based storage for certain event records, while Supabase is intended to manage authentication and database storage. Event details may be transmitted to the backend and RunPod Serverless for AI proposal generation.

RunPod API credentials are stored in server-side environment variables rather than exposed in frontend code. The application does not require sensitive financial information or payment card details.

As a hackathon prototype, formal data retention and deletion policies have not yet been implemented. Data may remain in browser storage or connected services until manually removed. Further privacy safeguards, access controls, and retention policies are required before production deployment.

6.2 Known Limitations & Risks

Identify the main technical limitations of your AI components (e.g., hallucination, bias, rate limits, dependency on a single provider) and any mitigation you have implemented.

[Maximum 150 words]

EventFlow AI relies on the Qwen3-8B model hosted on RunPod Serverless, which introduces several technical limitations. AI-generated proposals may contain inaccurate pricing, unrealistic service recommendations, or incomplete event details. Model outputs may also vary depending on user inputs.

RunPod Serverless may experience cold-start delays, request timeouts, or service unavailability. The system also depends on a third-party AI provider and available cloud computing credits.

To mitigate these risks, the backend implements structured output validation, error handling, request timeouts, and automated tests. The proposed workflow includes business review and approval of AI-generated proposals before they are presented to customers.

As the prototype is still under development, live AI integration and end-to-end reliability require further testing before production deployment.

7. Compliance & Readiness Checklist

Tick all boxes that apply before submitting.

- ☑ All APIs, cloud services, AI tools, models, and datasets used in the project are declared in this document.
- ☑ All third-party code, datasets, and models are used in accordance with their licenses, and attribution is provided where required.
- ☑ No API keys, passwords, or other credentials are exposed in the code repository, prototype, or this document.
- ☑ Any use of generative-AI tools for development has been disclosed and reviewed by the team.
- ☑ Any use of official SDC sponsor resources has been declared in Section 5.
- ☑ The prototype described here is accessible to judges through the links provided in Section 1.
- ☑ All fields in this template have been completed within the word limits stated.

8. Declaration

By submitting this document, the team leader confirms that the information provided is complete and accurate to the best of the team's knowledge, and that every API, cloud service, AI tool, dataset, model, and sponsor resource used in the project has been declared.
